Expert Comments on the International Response Program on Traditional Response Plan on Traditional Lung-toxin Dispelling Formula

No. 1/ Respiratory Detox Shot for Global Coronavirus Pneumonia

Proposed by World Health Science Organization

Coronavirus pneumonia (COVID-19) is rapidly spreading throughout the world, endangering health and lives. It has become a global focus because of its strong infectivity, epidemicity and high fatality rate. Currently, there is no effective medical intervention for prevention or treatment.

In the long-established history of Traditional Chinese Medicine (TCM), COVID-19 is categorized as a plague. As such, there is a complete system within TCM for prevention and treatment. More than 60,000 confirmed COVID-19 cases have been treated with Traditional Chinese Medicine. The clinical data from Chinese Departments of State demonstrates that a treatment approach combining TCM and Western medicine has positive effects on COVID-19 patients. Using this combined approach, we can offer a system for controlling the global outbreak of COVID-19.

Lung-toxin Dispelling Formula No.1 is one of the TCM solutions proposed by the World Health Science Organization for the treatment of COVID-19. The

formula is based on the classic TCM theory of Four Properties, Five Tastes and Meridian Distribution, along with a fusion of classical formulas such as *Yingqiao Powder* and *Zaojia Pills*. This prescription is applicable to COVID-19 prevention and treatment at any stage of illness and includes nine herbs, *Jinyinhua (Lonicera japonica Flos)*, *Lianqiao (Forsythiae Fructus)*, *Jingjie (Schizonepetae Herba)*, *Fengfang (Vespaee Nidus)*, *Zaojiaoci (Gleditsiae Spina)*, *Xuanshen (Scrophulariae Radix)*, *Xingren (Armeniacae Semen Amarum)*, *Renshen (Ginseng Radix et Rhizoma)*, *Gancao (Glycyrrhiza Radix et Rhizoma)*.

Six COVID-19 patients with severe/extremely severe disease according to the Chinese classification, who were hospitalized in January of 2020 in the Central Hospital in Zhu Madian and the First affiliated Hospital of Henan University of T.C.M., were treated with Lung-toxin Dispelling Formula No.1 combined with Western medicine. The average time for the PCR-NAD-test to go from positive to negative was 16 days. The average hospital stay was 20 days, and all six patients were cured and discharged. The results demonstrate that Lung-toxin Dispelling Formula No.1 has clinical efficacy in treating patients of COVID-19 type severe/ extremely severe. A related article was published in the *Chinese Journal of Experimental Traditional Medical Formulae* discussing the successful treatment of COVID-19 patients in many hospitals in China and in the hardest hit area of Hubei Province. The prescription is also effective in treating other respiratory diseases such as SARS, influenza A (H₁N₁) and acute interstitial pneumonia, etc.

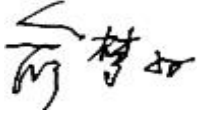

Experts at the meeting agree that: The prescription has an appropriate and precise formulation, reasonable compatibility, drug safety and encouraging efficacy. Its promotion and application have great social benefits! We suggest

further large-scale clinical verification and promotion. International communication and industrialized development of the formula (such as the dietary supplements in the U.S.) should be expedited. With this product as the core, an integrated industrial chain of prevention and treatment should be formed to develop and integrate related products, providing a new paradigm for an effective international response to COVID-19.
